ABOUT DQE COMMUNICATIONS

A partner for your business with an unparalleled level of network service & support

DQE Communications, headquartered in Pittsburgh, is a fiber optic Internet and data networking provider for businesses and carriers. Established in 1997, DQE is subsidiary of Pittsburgh-based Duquesne Light Holdings, and presently operates throughout Pennsylvania, Ohio, and West Virginia. DQE understands your network is a critical operational element. That's why we strive to provide your business with the fastest data speeds and the most reliable service backed by a dependable, local support team.

Internet
Adapts to meet business needs through an array of internet tiers including Internet Lite, Basic Internet Access, Dedicated Internet Access, Internet Advantage, and Highly Available Internet Access.

Dark Fiber
Dedicated and reliable service that has unlimited, unrestricted bandwidth and scalability opportunities, allowing businesses to transmit extraordinary amounts of vital data.

Colocation
Protects mission-critical data storage equipment with environmentally controlled, safe space including a 24x7 multi-tier card system and installed, locked cabinets.

Cloud Solution
Provides dedicated, private networking connectivity from your business location(s) to your Cloud Service Provider.

DDoS Mitigation
Responds to and mitigates DDoS attacks that can cause disturbances and potentially compromise business operations.

Offered to enhance any DQE Internet Solution.

Metro Ethernet
Extends your Ethernet LAN over our wide area network (WAN), connecting each user via a redundant, secure 100% fiber optic network with self-service scalability to adjust bandwidth in seconds, from 10 Mbps to 10 Gbps.

SD-WAN
Managed service that can be integrated into existing network infrastructure, giving the ability to connect businesses across multiple sites, cloud services, or off-site data centers.

Wavelength
Transports high-bandwidth, low-latency technologies with a wide range of high availability configuration options that can scale with your business growth.

Guest Wi-Fi
Provides Internet access for your customers, separate from your business' primary network which adds a layer of privacy to your network.

Wireless Backup
Keeps your business moving in the event of a service disruption, providing seamless transition to customer-controlled priority applications.
